

SECTOR**PETRO-CHEMICAL****SERVICES &
ABILITIES**

Makco Group and its associates have extensive expertise in the design and operations and maintenance of petrochemical units, completing many major projects in over 30 countries. Our experience in the manufacture or processing of various chemicals and petrochemicals includes cracking, polymerization, crystallizations, electrolysis and VCM Production.

Makco provides project management, engineering, design, and construction services for many of the leading firms in the fields of petrochemical processing, plastics and resins manufacturing, and hydrocarbon processing. We work closely with a number of process licensors and have a wide range of experience in revamps, expansions, compounding, and finishing lines.

Our ability to evaluate and work with diverse technologies on an unbiased basis is one of our key strengths. Similar track record in modifications, operations and maintenance of refinery services in the past 30 years has been achieved after working with various projects on project at grassroots level, revamping and expansion.

Our design and studies department is capable of providing FEED studies, pre-planning proposals, and feasibility studies for revamping and expansion projects.

Our construction departments can take responsibility of construction of jetties for direct imports and export processing.
